

Prima Amplifier

NEW!

Hybrid technology for the best of tube and solid state

We designed this amplifier to have the advantages of tube amplification without expensive and huge output transformers.

Therefore, we chose an hybrid concept, composed of a subminiature tube preamplifier and DMOS-FET amplifier. This special configuration allows to merge tube softness, texture and soundstage with transistor precision and power, producing soft, fast and detailed music, bringing life in each and every instrument and voice.

Built with the same care as our top of the range products, this cost effective amplifier features remote controlled volume and includes 5 line inputs and a tape monitor.

Take your first flight with Audio Aero.

Specifications :

Frequency range : 7 Hz - 50 kHz (- 1dB)

Output power : 100 W / 8 W

THD : < 0,1 %

Hybrid sub-miniature tube & DMOS-FET technology

Tube : 6021W

Inputs : 4 single-ended RCA and 1 balanced XLR

Outputs : 1 single-ended RCA

Speaker outputs : gold plated binding posts

Chassis : 15/10 steel

Lid : 15/10 brushed aluminum

Delivered with Black Diamond Racing Pyramid Cones

Weight : 10 kg. / 22.05 lbs.

Dimensions (W x L x H) : 434 x 317 x 102 mm / 17.09 x 12.48 x 4.02 inches
