

This historical Joule-Electra Product info is provided courtesy of Signature Sound High-End Audio (Rich Brkich). We provide service, support, and (some) upgrades for Joule-Electra gear. Joule-Electra may no longer be in business, but we still love it! Signature Sound, Liverpool, NY USA Website: www.sigsound.com Tel: 315-622-4137 E-mail: hifi@sigsound.com

Music Begins With Mu

The Mu Follower topology for audio circuits was first showcased in Glass Audio. Joule Electra's first product, developed in 1992, was based on this innovative (read 1957) design. The tremendous success of the LA-100 line stage lead us to develop a fully differential Mu Follower drive for our VZN-100 OTL monoblocks introduced in 1993. These sensational amplifiers using the fabulous Russian triode, 6C33B, owe much of their sonic splendor to the Mu Follower.

Now comes the Joule Electra all tube medium/high gain phono stage using the same basic circuit topology with a slightly difference twist. This six tube phono stage sets a new standard for sonic splendor and will become the bench mark against which others are judged. Again the sonic superiority of the Mu Follower topology is king.

Contact us for further information about these ground breaking products using "new/old tubes and new/old technology". Just remember that at Joule Electra **TUBES R US!**
